

Install drivers bootloader on T8100

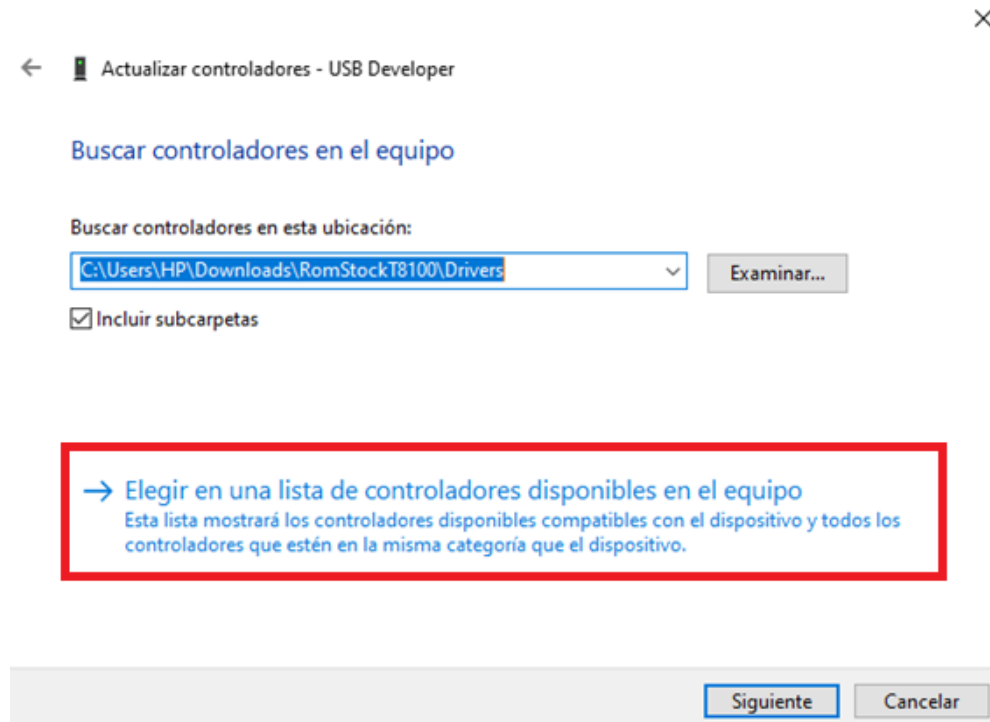

1. We go to the device manager and look for the "USB Developer"

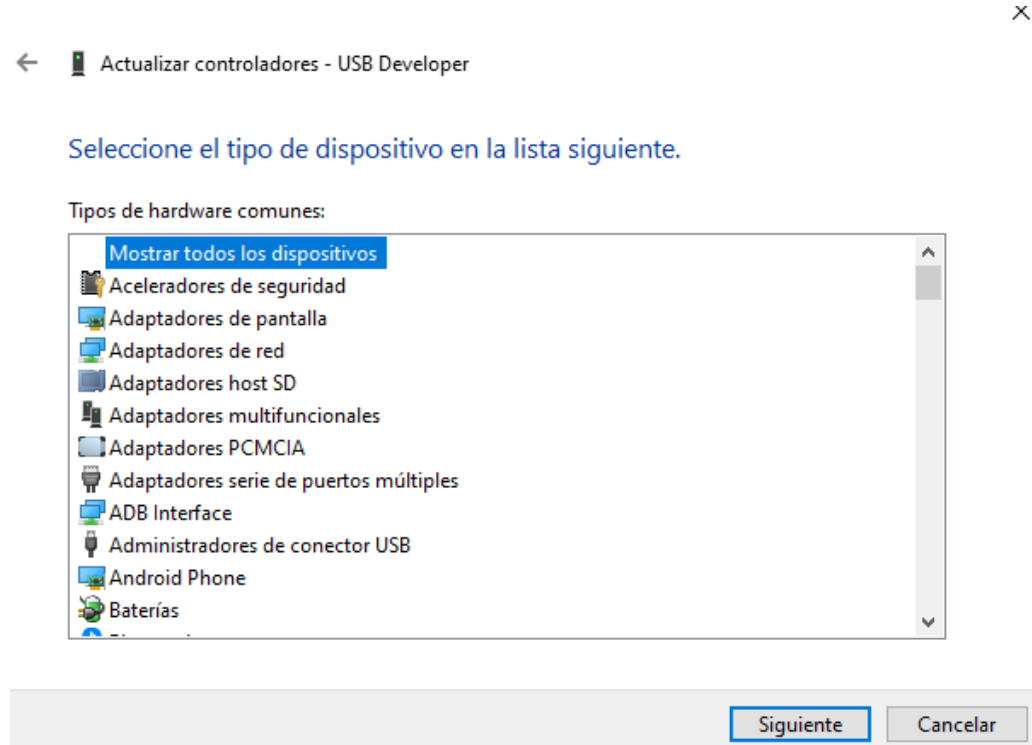

2. Click on "Update Driver..."

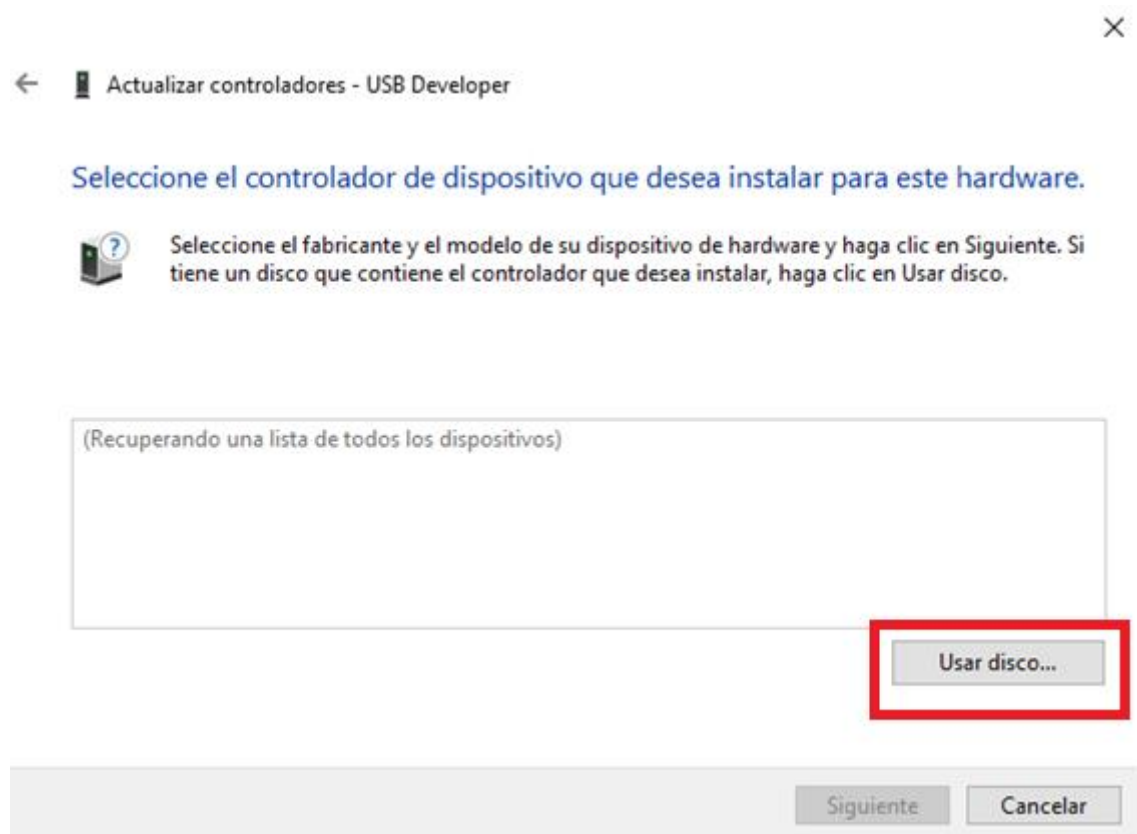

3. We press "Choose from a list of available drivers on the computer"

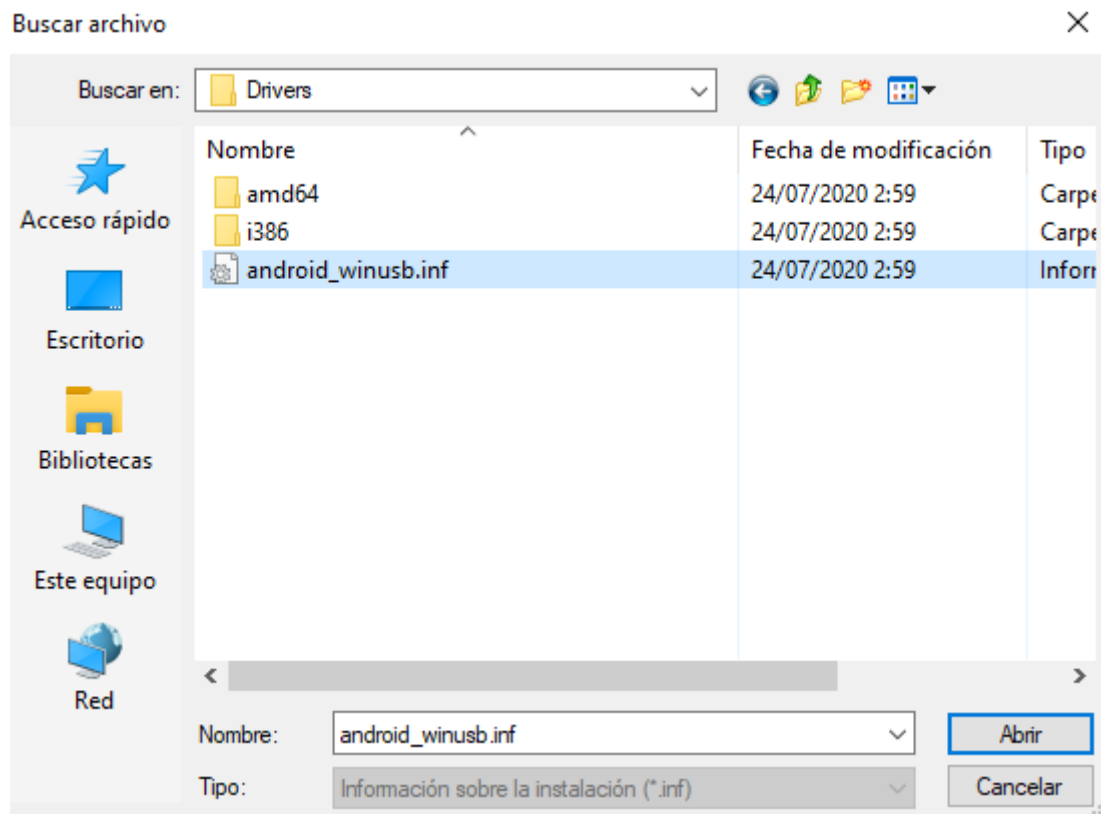

4. Show all devices

6. disk

7. We look for the "Android_winusb.inf" file in the directory where we have the drivers.

8. We select the driver called "Android Bootloader Interface"

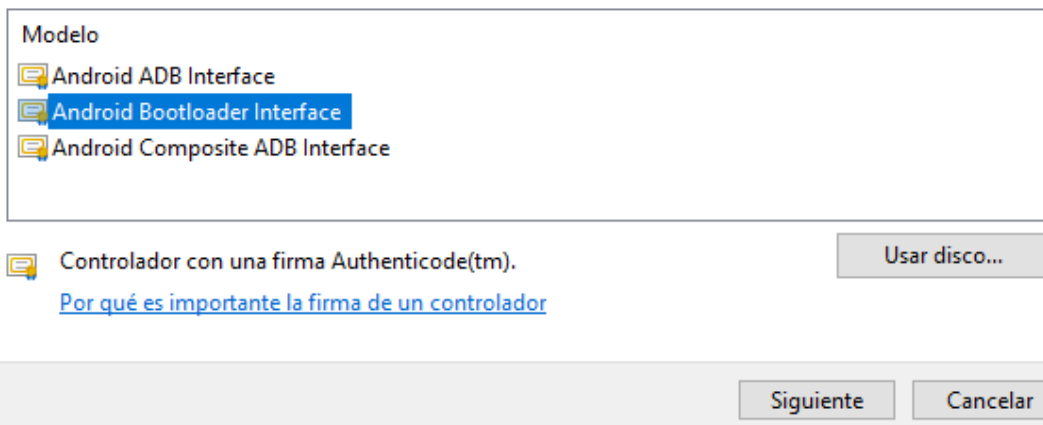

← Actualizar controladores - USB Developer

Seleccione el controlador de dispositivo que desea instalar para este hardware.

Seleccione el fabricante y el modelo de su dispositivo de hardware y haga clic en Siguiente. Si tiene un disco que contiene el controlador que desea instalar, haga clic en Usar disco.

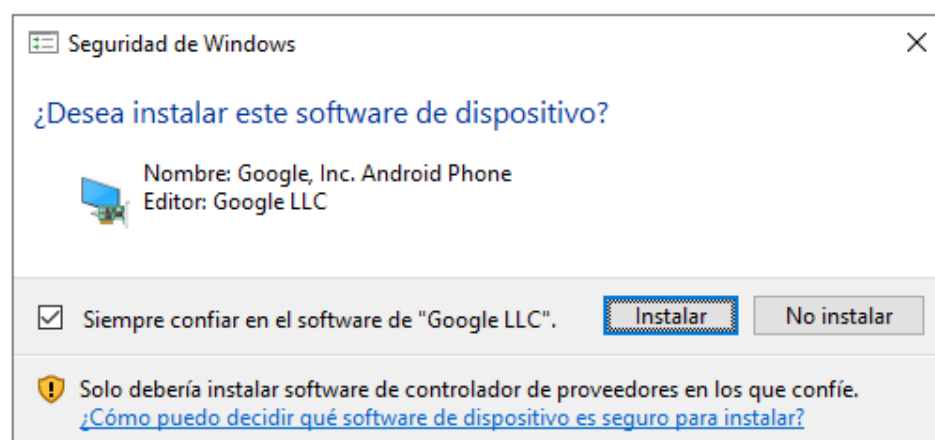

8. Finally, it will ask us if we are sure and then we will give the option "Install"

← Actualizar controladores - USB Developer

Instalando los controladores...

9. With this, we will have our driver installed and we will be able to enter commands in fastboot mode.
